Cultural Fit | Work preference

Work preferences show the type of working environment that someone is more comfortable in. It describes the expectations that people have about themselves and others. They are clustered in four distinct groups (Family, Adhocracy, Market, Hierarchy), and it is common that people will have a combination of preferences.

Work preference comparison

Your preferred working environment is:

Market

Characteristics of your preferences may be:

- Need for challenges & variety
- Room for taking initiative
- Results orientated
- Freedom to work

You like challenges and variety in your work. You feel comfortable in an environment where you can take the lead and get difficult tasks. You are motivated by action, goal setting and results. You are probably solution-oriented and like to make decisions. An environment in which you can take risks and have freedom of action suits you. Less appropriate is an organization where others check you or question your decisions.

The working environment of bunq is:

Market

Characteristics of these types of companies:

- Stable & in-control
- Decisive and direct
- End product is central
- External focus

Organizations with a market environment focus on external positioning, coupled with the need for stability and manageability (Rational goal model). Market-oriented organizations are known for being results-driven, competitive, and reputation-conscious, with proactive leadership and a drive for success.

Your work preferences match score

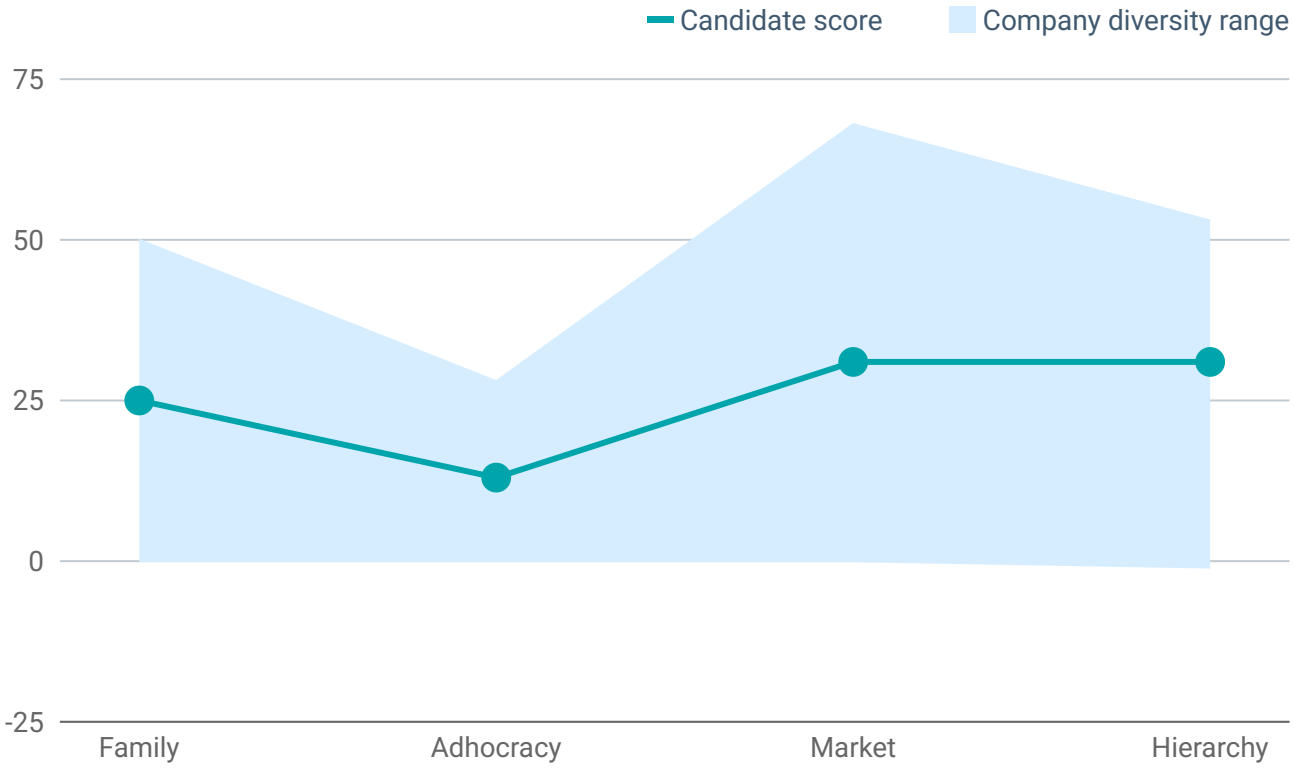
This score compares your preferences from the multiple choice questionnaire with the group's baseline on the four types of working environments: Family, Market, Adhocracy, and Hierarchy.

Very similar to current

You score *very similar to current* in the work preferences match score.

Your score reflects very little difference between your work preferences and the baseline group for this role. Think about what makes you happy in your daily work style and read about your preferred work environment in the following section. These insights can be very important when considering your next role and working environment.

Your work preferences versus baseline range



Things to consider regarding your fit with this company or role

Possible benefits

- **Greater job satisfaction:** You are more likely to feel satisfied in your job and experience positive emotions such as happiness and fulfillment.
- **Sense of belonging:** You are likely to feel more connected to your colleagues and way of working at the company. This can make collaboration easier.
- **More energy:** You may come across many aspects of the environment that are familiar and calming, helping you to feel energized.

Possible challenges

- **Limited exposure to new ideas:** Limited diversity can foster group thinking and limit exposure to new perspectives and ideas, hindering opportunities for career growth.
- **Fewer opportunities for personal development:** Working in an environment with many like-minded people, may limit your development in conflict communication and self-awareness.

Questions you can ask during interviews

The following are interview-ready questions you can ask that are related to the topics you care about. Use these to further explore how well you fit with bunq in terms of working environment.

Questions:

- Do you work with targets?
- Is it about quality or speed?
- What do the working days look like and do you often work overtime?
- Is overtime rewarded separately and/or do you work with bonuses?

Thrive and Grow

Your work environment preference is ***market*** which has the following characteristics:

Seeking challenges | *Taking initiative* | *Results-driven* | *Personal freedom*

You thrive the most in organizations that encourage their employees to seek challenges, take the lead, focus on results, and value personal freedom.

You may be more uncomfortable in organizations where people monitor your actions constantly, question your decisions, or don't provide the recognition you expect for your work. You might be someone who is highly results-oriented, competitive, and focused on achieving organizational goals.

Where you thrive

- Fast paced environment
- Working for results
- Taking initiative and showing leadership
- Having freedom to figure things out

Opportunities for growth

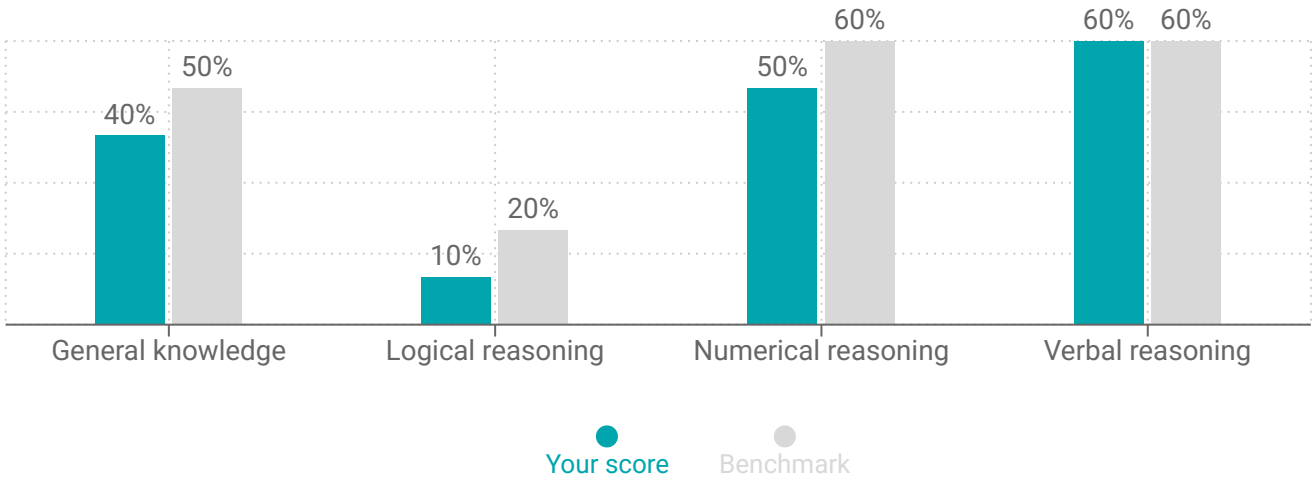
- Paying attention to details
- Taking time to bring others along
- Practicing patience
- Asking for recognition

Your cognitive abilities scores

Your cognitive ability scores are based on the number of correct and incorrect answers during the problem-solving section of the scan. The benchmark scores show the average score per type of cognitive task.

Why we measure cognitive abilities

Your cognitive (mental) skills scores reflect your ability to learn, adapt, problem-solve, and understand instructions. Cognitive skills are required in every job, but are especially important in highly complex, technical, and/or creative positions. In other words, cognitive skills become increasingly important as the job requires good problem-solving skills, good learning skills, and fast switching skills.



What do the scores mean?

General knowledge

General knowledge suggests how good you are at retrieving information from long term memory. It requires learned knowledge and is usually attained by conceptualizing the environment. It suggests awareness of the connectivity between events and places, and supports the logic needed to understand text. A high score shows that you are good at storing and retrieving information over time. A low score means that you may be missing some general learned knowledge or have trouble retrieving that knowledge.

Logical reasoning

Logical reasoning assesses the ability to use structured thinking to interpret patterns, number of sequences, or to deduce from a short passage which of a number of statements is the most accurate response. It involves the ability to isolate and identify various components of a bulk of information or any given argument. A high score suggests that you are good at understanding incomplete information and solving problems by creating solutions from fundamental principles. A low score means that you may have more difficulty using structured thinking to solve problems.

Numeric reasoning

Numerical reasoning assesses the ability to handle and interpret numerical data. It requires analytical skills and drawing conclusions from data. The data is presented in equations, tables or graphs. A high score shows good understanding or interpretation of numerical data and the ability to perform mathematical calculations. A low score means more difficulty in dealing with numerical data.

Verbal reasoning

Verbal reasoning is the ability to logically work through problems expressed in words. It aims at evaluating the ability to think constructively. It also assesses understanding and comprehension skills. A high score suggests good understanding and evaluating of written reports and documents. A low score means more difficulty using concepts framed in words and more limited vocabulary.
